Seller responsibilities

Seller responsibilities

We have partnered with Mirakl in order to offer a world class seller experience on our marketplace.

As a seller, you are responsible to upload your products into the correct category and provide accurate product information to the best of your ability including keeping your stock level up to date.

We have not launched the marketplace proposition across all our categories yet. You should only upload products in selected categories which are currently available for upload.

As additional categories open for third party selling on our marketplace, your Account Manager will inform you.

If, after reading this guide, you have any questions or concerns, please contact the B&Q support team via email on merchant.support@b-and-q.co.uk

**B&Q product
attributes**

B&Q product attributes

 [Attributes definitions reference Guide](#)

Attributes are specific items of data about your product, which are important for discoverability and to help customers decide if the product is right for them.

The attributes and files we request have been determined based on industry best practices. The information you input will be presented on the product page to help customers discover and decide, and will have a direct impact on traffic and sales.

Some of the attributes are mandatory, as indicated by an asterisk on the Mirakl interface, while the remaining ones are recommended. Although not mandatory to enable a product sale on our marketplace, we strongly encourage you to complete the recommended attributes too; there is a direct correlation between the quality of product information and customer purchases.

The information a customer needs to make an informed purchasing decision varies based on the product type, we have therefore determined the required attributes at this level. (Please note, some of the attributes detailed below are not required for every product. You will be told when uploading a product what attributes are mandatory).

Providing relevant and accurate information is your responsibility and crucial in ensuring your product is legally compliant, as well as ensuring customers can find your product and make an informed purchasing decision.

If you would like further information on how to map your information onto the B&Q provided attributes, please follow the link below; and if any questions remain – contact your MP account manager.

01 Product titles

Product titles are developed based on rules. They are automatically generated for you based on the attributes that you input.

The below example shows the formula and resulting example for the Small Domestic Appliances category, where:

 Red
Mandatory  Green
Recommended

Brand + **Range** + **Model number/name** + **Colour** + **Product type** + **Key feature**

The resulting product title would be:

“Kenwood MultiPro FDP645WH White Food Processor with 4.7 Litre Bowl”

As the formula to generate product titles differs across categories, the mandatory attributes required in each category may vary.

02 Wider PDP assets

There are two types of wider PDP assets that can be uploaded:

- Legally required documents (different requirements based on your product) and
- Optional product files

Mandatory legal documents

Energy label

Mandatory energy label and upload of energy rating sheet (with UK flag & QR code if you're selling in England, Scotland and Wales only, or with UK and EU flag and QR codes if you're selling in the whole of the UK- including Northern Ireland; example below). The Energy label rates products in terms of efficiency and shows the relevant statistics (e.g. overall energy consumption). This is a mandatory upload across particular (not all) categories of products and should be uploaded as an image.

Product specific regulations

Some product types may legally require compliance with specific regulations (e.g. fire safety). If these apply to your product, you are legally obliged to comply with these guidelines and be able to produce proof upon request.

Optional product files

Product Instruction manual

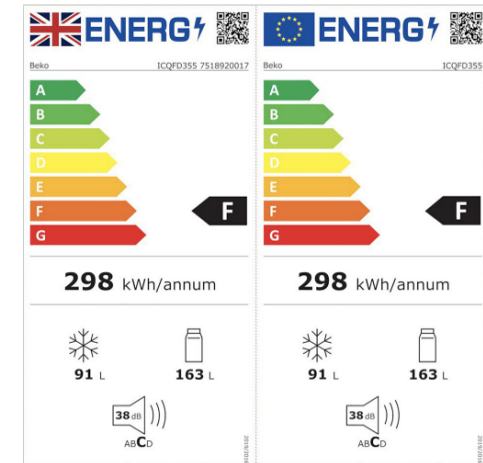

PDF file explaining how a customer can install the product or build the product.

Product guide

PDF file explaining what is included with the product, how it works & general overview of the product.

Safety manual

PDF file representing the products safety manual, providing detailed information on how to safely use the product.

03 Images

Only the primary product image is mandatory. However, we recommend providing supporting images to best highlight your product and provide an accurate representation to customers.

Primary (mandatory) image requirements

- Drawing/illustrations of the product are not allowed
- The image shouldn't contain additional or confusing objects/products
- The image has to be sharp, professionally lit, and photographed or digitized with realistic colors and smooth edges
- The complete product has to be in the frame
- The image shouldn't contain additional text, graphics, or inserts.

Additional (recommended) image requirements

- Image has to be sharp, professionally lit, and photographed or digitized with realistic colors and smooth edges
- Other products or objects are allowed to help demonstrate the use or scale of the product
- The product and accessories must fill 85% or more of the frame of the image
- Backgrounds and environments are allowed.

For the full images technical specification, please see appendix A.

04 Images types

04 Images types

Depending on what type of product you are selling you must upload specific types of product images. Ahead of uploading your pictures, please refer to the linked document below that will advise you to either follow the “General Imagery Guidelines” or whether you must use an alternative Primary Product Image in order to more effectively market your product.

[Imagery Guideline Reference Document](#)

Please follow the General Imagery Guidelines below:

1. Key
2. Image attribute name
3. Image type you should upload against this attribute: Mandatory-ness

Example image

Description

Mandatory

Image_main_1

LHS primary product photo

Mandatory

Photographed with side of the product at an angle at approximately 45°, with a top view of the product at approximately 25°.

Supporting

Image_secondary_1

Alternative angle

Optional

To Camera: Photographed to camera with a top view of the product at ~25°

Right: Photographed with side of the product at an angle at ~45°, with a top view of the product at ~25°. (Only if different from LHS).

Back: Photographed to camera with a top view of the product at ~25°. (Only if different from front side).

Side: Photographed to camera with a top view of the product at ~25°

Supporting

Image_secondary_2

Key feature/Detail

Optional

Highlight the key features (finish, material, USP, function, buttons, mechanism etc.).

Supporting

Image_secondary_3

Additional compartment

Optional

Lid open, props on, product turned off, product function (stacked/folded). Shots either be captured to the left or to camera.

04 Images types

15

Depending on what type of product you are selling you must upload specific types of product images. Ahead of uploading your pictures, please refer to the linked document below that will advise you to either follow the “General Imagery Guidelines” or whether you must use an alternative Primary Product Image in order to more effectively market your product.

[🔗 Imagery Guideline Reference Document](#)

Please follow the General Imagery Guidelines below:

1. Key
2. Image attribute name
3. Image type you should upload against this attribute: Mandatory-ness

Example image

Description

Optional		Image_secondary_4 Cameo/in situ: Send full crop Optional Focus on product. In situ product cameo (top) or in situ product in lifestyle setting (bottom).
Optional		Image_secondary_5 Component Optional Photographed to display all components of the product in a neat & considered way.
Optional		Image_secondary_6 In packaging Optional Either To Camera if blister: Photographed with a top view of the product at approx 25° Angled if box: Photographed with side of the product at an angle at approx 45°, with a top view of the product at approx 2°.
Optional		Image_secondary_7 Multi packs Optional Either To Camera: Photographed to camera with top view of the product at approx. 25° Left: Photographed with side of the product at an angle at approx 45°, with a top view of the product at approx 25°

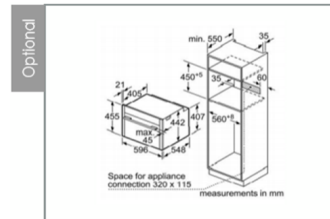

Depending on what type of product you are selling you must upload specific types of product images. Ahead of uploading your pictures, please refer to the linked document below that will advise you to either follow the “General Imagery Guidelines” or whether you must use an alternative Primary Product Image in order to more effectively market your product.

 [Imagery Guideline Reference Document](#)

Please follow the General Imagery Guidelines below:

1. Key
 2. Image attribute name
 3. Image type you should upload
- against this attribute: Mandatory-ness

Example image

Description

Image_secondary_8

Accurate line drawing of the product

Optional

Please ensure all dimensions match the data you provide.

05 Product videos
&

06 Missing attribute values

While optional, a video is a good opportunity to highlight your product's key features (material, buttons etc.), benefits, design & style, and to demonstrate how it works in a more engaging manner.

Good quality videos can increase traffic and conversions.

Video requirements

- MP4 format
- 30 - 60 seconds long

06 Missing attribute values

If you cannot find a value that you require to accurately populate an attribute, you can send a request to your Account Manager to add this value into the list of values (LOV).

If your Account Manager finds that you cannot use an alternative value and this information is important to the customer journey, then they will organise that your value is added in the LOV and inform you of the addition upon completion.

Mirakl configuration wizard

When uploading products through any method other than the pre-defined Mirakl product upload format, the Mirakl Configuration Wizard must be completed. The Mirakl Configuration Wizard is a mapping tool that allows you to define a correlation table between your product information and the B&Q data model. This indicates which categories and attribute columns from the file being uploaded (or sent via API or app) relate to which categories and attribute columns in the B&Q data model. Once the mapping table is created, you're able to upload your product feed without having to transform it.

Prior to starting the mapping process, make sure that all the mandatory attributes required by B&Q for each category you wish to add are present in your product data. Only use the Configuration wizard for your initial mapping and product import. Once the mapping configuration is defined, there is no need to use the Mapping Configuration Wizard anymore unless the products in your file refer to new catalogue categories.

To configure the wizard, navigate to:

“My Account” > “Mapping Configuration” > “Use the configuration wizard”.

The steps required to complete the Configuration Wizard are:

1. Import product file

Upload a CSV or XLSX format file containing the products to import. The maximum number of columns in the file is 1000.

2. Categorisation

You will be shown a preview of the file that you uploaded during the previous step. This preview will display the first ten lines of the file.

In the "Categorization" pane, click the column corresponding to the category drop-down list. If the category attribute in the file is the same as the one defined in the seller's configuration, it is automatically selected from the drop-down list.

3. Category mapping

Here you can map your catalogue categories to the B&Q categories. You can:

- Map each of your catalogue categories to only one operator category catalogue
- Map several of your catalogue categories into the same operator catalogue category

To map your catalogue categories, drag and drop your category from the left pane to a B&Q category. To cancel a mapping click Cancel icon (black cross) next to the category. Once one of your categories is mapped, it appears greyed out in the tree and the B&Q category label to which it is mapped appears in brackets.

If B&Q does not to sell one of your categories, this category should remain unmapped.

Automapping Categories

Depending on the category names within your file, it may be possible to automap your categories using Mirakl AI. To do this, click the "Automap" button next to a category.

The "Automap Categories" pop-up opens showing a list of mapping suggestions.

All the suggestions in the "Automap Categories" pop-up are checked by default when they are exact matches of one operator categories.

4. Attribute mapping

You are required to map the attributes of your product catalogue to the ones required by B&Q. You must at least map the red mandatory attributes. Map the attributes by dragging and dropping them, as you did to map catalogue categories.

"My Attributes" on the left shows the column names from the product file that was imported during step 1. The "Operator attributes" section on the right shows the B&Q categories that were mapped to your categories in the previous step, as well as a list of the attributes required against each subcategory.

Map your attributes by dragging and dropping them, as you did for catalogue categories. Once mapped, the label of the corresponding operator attribute includes the label of its mapped seller attribute in brackets.

Automapping attributes

Depending on the field names within your file, it may be possible to automap your attributes using Mirakl AI. To do this, click the “Automap” button.

The “Automap Attributes” pop-up opens showing a list of mapping suggestions for that category. If necessary, uncheck some or all suggestions. Any attributes which aren’t able to be mapped using the automap feature will need to be mapped using the drop and drop process.

5. Value mapping

If you have mapped an attribute to B&Q attribute that has a value list validation, you must map your values to the B&Q values. The wizard detects if B&Q has defined a list of values for product attributes.

For example, for the ‘colour’ attribute, B&Q could configure that only a select list of main colours are accepted. In this case, you would be able to map your values of “matt black”, “jet black” and “carbon black” to the B&Q colour of “Black”. If there aren’t any value list validations to be met, the right side of the screen won’t show any “Operator Values” and you can simply click “Next step” to move on.

Similar to mapping categories and attributes, you can click the Automap icon to map the values that have exactly the same labels.

6. Define rules

You are then able to create transformations and validation rules. For example, you can decide to add a capital letter at the beginning of each sentence or remove the HTML from your descriptions.

You can also add regular or constant expressions to attributes with value lists. For example, for all cells with no colours specified, you can enter “N/A” in the empty cells which will enable you to map them to any “Not applied” values of B&Q. If not, all empty cells will result in errors, and this will prevent you from uploading the corresponding products.

To create a rule

1. Select an attribute from the “My Attributes” pane. The pane on the right will display information about the attribute based on the operator’s description.
2. Click “Add” to add a transformation or validation rule. If you add several transformation rules, drag and drop them to set the order in which they are applied.
3. Click Next step.

7. Summary and validation

In the final step of the wizard, you will see a summary of your products' eligibility to be imported, or if any part of the mapping is incomplete.

The system will only check if your categories and mandatory attributes are mapped to those of B&Q. If you still need to map some categories or attributes, click “**Back to category mapping**” or “**Back to attribute mapping**”.

To import your products into the marketplace, click “**Import my products**”.

Product import methods

Product import methods

25

There are different methods available to import products to Mirakl. These include:

Import from file

Shopify product upload

Magento 1 connector

Magento 2 connector

Linnworks Integration

API integration

01 Import from file

01 Import from file

Sellers can populate a CSV template in order to upload their inventory to the B&Q Mirakl Marketplace.

In order to download the product upload template, navigate to

“My Inventory” > “Import from File”.

From here you can “Configure and download an operator Excel file template”. You are then able to download the template containing (1) just required fields, (2) required and recommended fields, or (3) all (Required, recommended and optional) fields. Then you are required to select the necessary subcategories for your products before generating the template ([video](#)).

	A	B	C	D	E	F	G	AA
1	Category	Shop SKU	Name	EAN	MultiSKU Product Group ID	Main Image 1	Secondary Image 1	Acquisition brand
2	category	shop_sku	name	ean	Mirakl_ProductGroup_ID	image_main_1	image_secondary_1	Acquisition brand
3	Marketplace Categories/Painting & Decorating/Wallcoverings/Wallpaper							
4	Marketplace Categories/Painting & Decorating/Wallcoverings/Wallpaper							
5	Marketplace Categories/Painting & Decorating/Wallcoverings/Wallpaper							
6	Marketplace Categories/Painting & Decorating/Wallcoverings/Wallpaper							
7	Marketplace Categories/Painting & Decorating/Wallcoverings/Wallpaper							
8	Marketplace Categories/Painting & Decorating/Wallcoverings/Wallpaper							
9	Marketplace Categories/Painting & Decorating/Wallcoverings/Wallpaper							
10	Marketplace Categories/Painting & Decorating/Wallcoverings/Wallpaper							
11	Marketplace Categories/Painting & Decorating/Wallcoverings/Wallpaper							
12	Marketplace Categories/Painting & Decorating/Wallcoverings/Wallpaper							
13	Marketplace Categories/Painting & Decorating/Wallcoverings/Wallpaper							

After selecting the appropriate category for your product in column A, conditional formatting is applied in the product template file to highlight which attributes are required, recommended or optional ([video](#)). The mandatory attributes vary dependent on the subcategory being imported:

The populated product template file then needs to be uploaded into the Mirakl portal. To do this, navigate to:

“My Inventory” > “Import from File”

On this page you are able to select a file from your computer and import it to be processed ([video](#)).

In order to view the progress of your imports, navigate to:

“My Inventory” > “Import from File” > “Track Product Imports”

Here you are able to see the number of lines processed and whether any errors have been identified in the file. Where errors have been detected, you should download the “Download transformation error report” to see more details on these errors ([video](#)). Once all errors have been resolved, the file can then be reuploaded using the same method as described above.

01 Import from file

Sellers can populate a CSV template in order to upload their inventory to the B&Q Mirakl Marketplace.

Step-by-Step Videos:

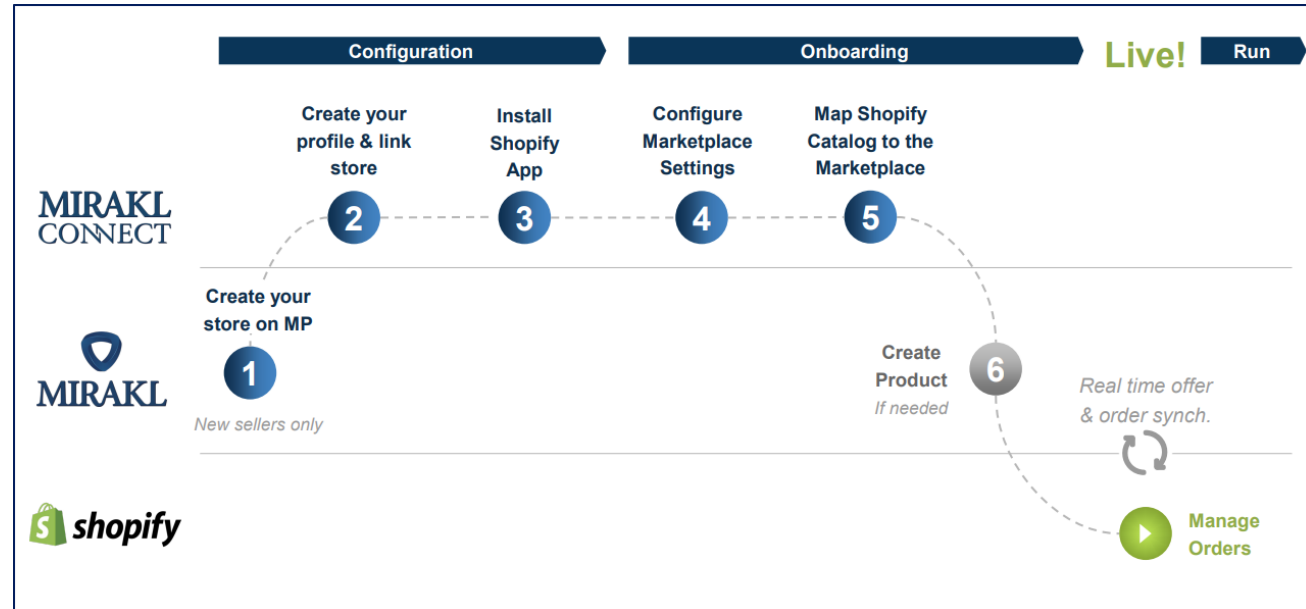

1. Download a product template ([video](#))
2. Populate the product template ([video](#))
3. Import the product template ([video](#))
4. Review and fix any errors ([video](#))
5. Reupload amended product template without errors

02 Shopify product upload

02 Shopify Product Upload

Sellers who use Shopify as their eCommerce platform can use the Mirakl Marketplaces App to synchronise their inventory with B&Q's Marketplace.

The Shopify App is a free-to-use plug-in compatible with Mirakl Marketplaces that enables sellers to export their entire product catalogue from Shopify to Mirakl. To manage and configure marketplace listings using the app, sellers must create an account in Mirakl Connect. The flow of product information is shown in the diagram below.

Setup steps:

1. Create an account in [Mirakl Connect](#)
2. Add the [Mirakl Marketplaces App](#) from the Shopify App Store ([video](#))
3. Import your catalogue to Mirakl Connect
4. Set the rules of how you want to work with the B&Q Marketplace ([video](#))
5. Configure which products you want to send to B&Q ([video](#))
6. Map your product attributes with B&Qs attributes and send catalogue from Mirakl Connect to B&Qs Marketplace ([video](#))

02 Shopify Product Upload

Sellers who use Shopify as their eCommerce platform can use the Mirakl Marketplaces App to synchronise their inventory with B&Q's Marketplace.

Further guidance documentation is available on the Mirakl Marketplaces app here:

[Shopify app overview](#)

[Setup guidance PDF](#)

[Shopify app FAQs](#)

03 Magento 1 connector

03 Magento 1 connector

Sellers who use Magento 1 as their eCommerce platform can use the Magento Seller Connector to connect to the B&Q Mirakl Marketplace in order to upload their inventory and manage orders.

33

To set up this connection, please complete the following steps:

1. Install the Magento 1 Mirakl seller connector from the Magento back office ([Instructions](#) & [downloads](#))
2. Create a connection and a listing
3. Configure product export and prices & stocks
4. Map categories using [Mirakl category mapping wizard](#)
5. Schedule product imports to Mirakl from Magento 1

Step by step video guides on this process are available [here](#).

04 Magento 2 connector

04 Magento 2 connector

Sellers who use Magento 2 as their eCommerce platform can use the Magento 2 Seller Connector to connect to the B&Q Mirakl Marketplace in order to upload their inventory and manage orders.

35

To set up this connection, please complete the following steps:

1. Install the Magento 2 Seller Connector ([Downloads](#))
2. Create a connection and a listing
3. Configure product export and prices & stocks
4. Map categories using [Mirakl category mapping wizard](#)
5. Schedule product imports to Mirakl from Magento 2

Step by step video guides are available [here](#).

05 Linnworks integration

05 Linnworks Integration

Sellers who use Linnworks to manage their inventory can use the Linnworks Mirakl Marketplace app to integrate their products. The Linnworks / Mirakl configurator currently only supports offer creation for products that already exist in Mirakl. This connector does not currently support updating product attributes and creating products in Mirakl still needs to be done by conventional Mirakl means.

1. Install the Mirakl Marketplace App

1. Within Linnworks, navigate to “Settings” > “Channel Integrations”
2. Click “Add new” channel integration
3. Search for “Mirakl”
4. Click “Install Application”
5. Add a Mirakl account name. This can be any name to help you identify the B&Q marketplace. Click next to move to the next page.
6. Tick the checkbox to agree to the disclaimer and click “Next” to move to the next page
7. Check all fields that are applicable. You can leave all unchecked if required.
8. Click “Finish” to end the setup wizard.

2. Authorize your Mirakl account

1. Click the pencil icon to edit the channel integration
2. Click “Authorize Mirakl Marketplace”. A new tab will open in your browser.
3. Click “Sign in with Mirakl”. This will redirect you to the Mirakl website.
4. Log in with your Mirakl account. You will be presented with a list of marketplaces
5. Select the B&Q marketplace, choose your shop, and click “Confirm”
6. Click “Confirm” at the bottom of the page. The system will handle your authorization. This shouldn’t take longer than 15 seconds.
7. Go back to your Linnworks tab and save your configuration by clicking “Save”.

3. Configure your integration as required

Sellers who use Linnworks to manage their inventory can use the Linnworks Mirakl Marketplace app to integrate their products. The Linnworks / Mirakl configurator currently only supports offer creation for products that already exist in Mirakl. This connector does not currently support updating product attributes and creating products in Mirakl still needs to be done by conventional Mirakl means.

4. Create a Mirakl configurator

1. Go to Settings > Configurators > Others > select Mirakl from the drop-down menu
2. Click “Add New”
3. In the configurator wizard enter:
 - 3.1 Configurator Name: The configurator name can help differentiate between certain groups of items
 - 3.2 Channel: Select the Mirakl account that this configurator will use when creating new listings
4. Click “Finish”

Once your products have been created in Mirakl, you will then be able to import your offers and manage orders through the Linnworks connector. The list of supported functionalities is as follows:

- Inventory Updates
- Inventory Mapping
- Channel Tax Settings
- Location Mapping
- Order Cancellations
- Order Download
- Order Despatch
- Order Refunds
- Payment Mapping
- Price Change
- Shipping Mapping
- Listing Creation (only for products that already exist on the marketplace)

Installation & Configuration Guidance

Mirakl Configurator Guidance

You're able to contact Fulfillin (the third-party creators of this connector) directly via the chat function on www.fulfillin.com.

06 API integration

Sellers are able to automate interactions between their systems and the Marketplace through the use of APIs.

Due to the granular detail of the individual APIs available, you can automate part or all of your activity on the marketplace, depending on the level of autonomy you want. For example, you can automate offers and orders but keep product uploads as a manual process using Excel files.

Mirakl Seller APIs allow you to automate 4 main parts of your activity on the marketplace:

- Shop information
- Catalogue: products & offers
- Orders management & shipping information
- Accounting management

In this guide, we will only cover product APIs. For more information on offer, order, after-sales management, and accounting APIs, see the [Mirakl API documentation](#). For the full list of APIs available, see appendix B.

Sellers are able to automate interactions between their systems and the Marketplace through the use of APIs.

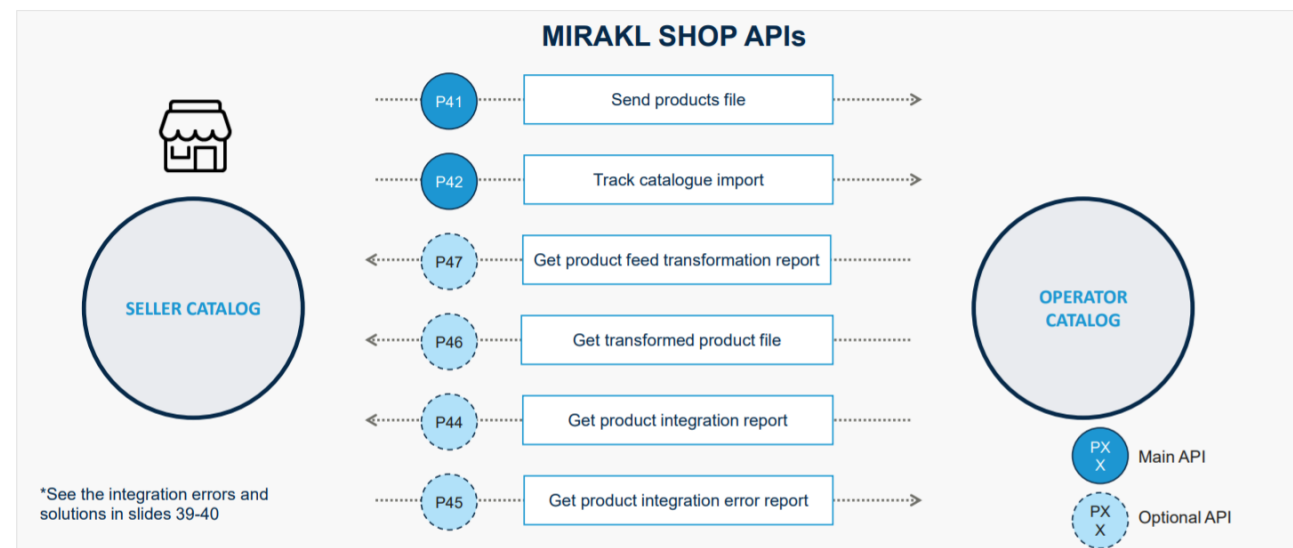

1. Obtaining Your API Key

The API key is unique for each seller and gives you access to the Mirakl seller APIs. Do not communicate your API key to anyone. You will first integrate your APIs on the test environment, then, once your integration is validated, you will repeat the integration on the production environment. As each API Key is specific to an environment, you will need to generate an API key for the test environment and then, one for the production environment.

In order to obtain your API key:

1. Log into your Mirakl shop
2. Click on your username, in the top right, to access your user settings
3. In the tab “API key”, select “Generate” to create your API key

2. Product APIs

The main product APIs are P41 (Send products file) and P42 (Track catalogue import).

Sellers are able to automate interactions between their systems and the Marketplace through the use of APIs.

The prerequisites required to use the products import automation are:

1. Configuration Mapping Wizard

The configuration mapping wizard must be completed in Mirakl. This indicates how your categories and attributes relate to the B&Q categories and attributes. For more information on configuring the wizard, see the [Mirakl Configuration Wizard](#) section of this document.

3. Testing Your API Integration

After reading the API documentation and defining your integration strategy, you can test all these APIs with Postman. It will help you define which APIs you want to implement to automate your activity on the marketplace.

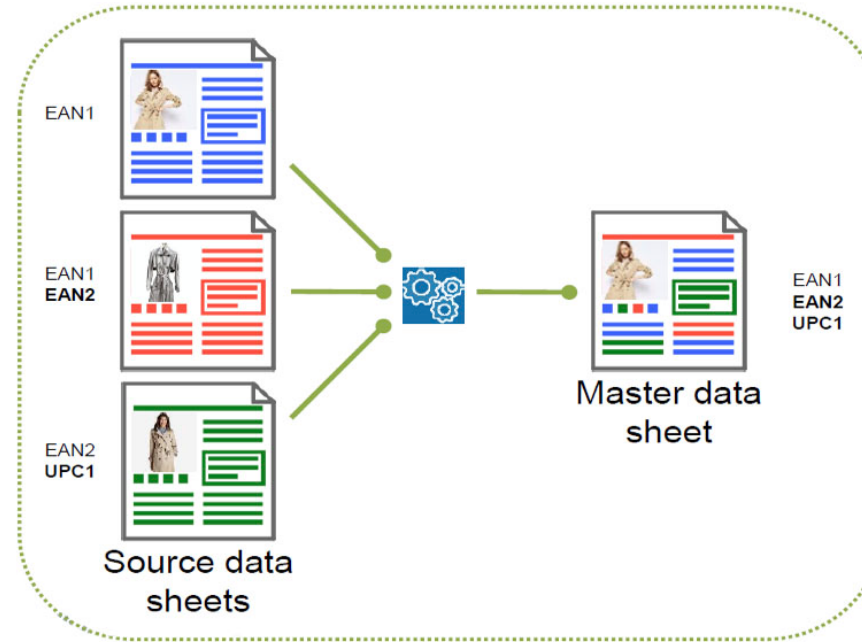

Postman is a third-party software that allows testing API calls easily and efficiently. The Mirakl API collection can be imported in Postman to test your API integration. The full Mirakl API collection is available [here](#).

B&Q will test and validate the integration in the test environment before deploying it in the production environment.

**Appearance on
the B&Q online
platform**

Appearance on the B&Q online platform

As multiple sellers can be selling products on the same offer, we consolidate these multiple inputs to create one product page on diy.com that is presented to the customer:

We take your product information and combine it with that of other sellers in order to create the most complete product page possible. It is also important to note that if a product is sold by B&Q, or if there is a more competitive offer from a different seller, your offer will not be the one that is shown first on the website.

01 Product issues

If a high priority issue is identified (e.g., a mismatched image/ pdf/ text or incorrect documents), your Account Manager will notify you that the product listing is fraudulent and suspend your product until the issue is resolved.

If the issue pertains to a lower priority issue, it will be flagged, and you will be notified that you must resolve the issue as soon as possible. In this case, if the issue remains unresolved after 14 days of the product remaining live, the product will be suspended until resolution.

Appendix

Imagery technical specifications

- Image size: Minimum 2000 x 2000 pixels
- Image resolution: 300 dpi
- Crops: All images to be square and product to be centered. If lifestyle images, then to be sent full crop suitable to fit square and either landscape or portrait
- File format: JPEG or PNG
- For cut out images, JPEG's must have an accurate clipping path embedded in the file with a pure white background. PNG files must be provided with a transparent background.
- Colourspace: RGB

Mirakl APIs

- GET BI01 - Get the Business Intelligence file from your platform
- GET SH02 - List shipping charges of each offer, grouped by orders
- POST CO01 - Create or update customer organizations
- POST CU01 - Create or update customers
- GET DR72 - List order-related accounting documents
- GET DR73 - Download order-related accounting documents
- PUT IV07 - Confirm the payment of accounting documents
- GET TL01 - List transaction lines
- GET TL02 - List transaction lines
- GET M10 - Retrieve a thread
- GET M11 - List all threads
- POST M12 - Reply to a thread
- GET M13 - Download an attachment
- POST OF42 - Send a message to a seller

- POST OR43 - Create a thread on an order
- POST ST01 - Create shipments
- PUT ST06 - Delete shipments in shipping status
- GET ST11 - List shipments
- POST ST23 - Update carrier tracking information for shipments
- PUT ST24 - Validate shipments as shipped
- PUT ST25 - Validate shipments as received
- PUT ST27 - Validate the receipt of "Click & Collect" shipments in an operator store
- GET OF22 - Get information about an offer
- GET OF51 - Get offers CSV file
- POST OF52 - Export offers CSV file asynchronously
- GET OF53 - Poll the status of an asynchronous offer export (OF52)
- GET OF54 - Retrieve offer files once asynchronous offer export is complete (OF52)
- GET P11 - List offers for each given product
- POST OR01 - Create an order
- PUT OR02 - Validate a commercial order
- PUT OR03 - Invalidate a commercial order
- PUT OR04 - Patch update orders
- PUT OR07 - Update order line shipping origin
- GET OR11 - List orders
- PUT OR21 - Accept or refuse order lines
- PUT OR23 - Update carrier tracking information for a specific order
- PUT OR24 - Validate the shipment of an order
- PUT OR25 - Validate the receipt of an order
- PUT OR27 - Validate the receipt of an order in an operator store

- PUT OR29 - Cancel an order not yet debited from the customer
- PUT OR30 - Request cancelations on order lines
- PUT OR31 - Update the custom fields of an order and its order lines
- GET OR51 - Get the evaluation of an order
- POST OR52 - Post an evaluation on an order
- POST OR62 - Post an incident on an order line
- PUT OR63 - Close an incident on an order line
- PUT OR65 - Dispute incident
- GET OR72 - Lists order's documents
- GET OR73 - Download one or multiple documents attached to one or multiple orders
- POST OR74 - Upload documents to attach to an order
- GET OR75 - List all the order taxes available on the platform
- DELETE OR76 - Delete an order document
- PUT PA01 - Validate or invalidate the payment of an order
- PUT PA02 - Validate or invalidate the refund of order lines
- GET PA11 - List pending order debits
- GET PA12 - List pending order refunds
- GET AF01 - List all custom fields
- GET CH11 - List all enabled channels
- GET DO01 - List all document types
- GET EV01 - List rating types on your platform
- GET L01 - List locale codes and labels
- GET OF61 - List offer conditions
- GET RE01 - List refund, incident, and message reasons

- GET SH11 - List all active shipping zones
- GET SH12 - List all active shipping methods
- GET SH21 - List all carriers
- GET SH31 - List all logistic classes
- GET V01 - Health Check endpoint
- POST CA01 - Synchronize Marketplace categories from the operator information system with Mirakl
- GET CA02 - Get the status of a Marketplace categories synchronization
- GET CA03 - Get the error report file for a Marketplace categories synchronization
- GET CA11 - Get all Marketplace categories from your platform
- POST H01 - Import a file to add operator's Catalog categories to Mirakl
- GET H02 - Get the status of a Catalog categories import
- GET H03 - Get the error report file for a Catalog categories import
- GET H11 - List Catalog categories (parents and children) related to a Catalog category
- GET P13 - Export all products
- POST P21 - Synchronize products from the operator information system with Mirakl
